TOTAL REFUND REQUESTED	<u>\$137.00</u>

III. EXPLANATION OF WHY CONTESTED CHARGE IS IN ERROR

The contested charge to the deposit account is listed under fee code 101, which is the code for the basic filing fee. Upon reviewing the application as filed, applicant can identify no shortfall in the amount submitted with the application that would require additional payments.

Specifically, as shown on the fee calculation sheet (copy enclosed) submitted with the application, the applicant owed the basic filing fee for a small entity (the small entity declaration having been filed in prior application no. 08/317,763) of \$365, plus the additional fee of \$228 for submission of 6 extra independent claims, for a total of \$593. The applicant's attorneys' records reflect payment of this amount by check enclosed with the application (copy of check stub enclosed). As further confirmation that the full \$593 was submitted to and acknowledged by the U.S. PTO, enclosed is a copy of the post card submitted with the application and returned to applicant's attorneys by the U.S. PTO. The postcard shows that applicants submitted a check for \$593.

Accordingly, because the full \$593 was paid and no additional fee beyond the \$593 is due, applicant's attorneys' deposit account no. 18-0350 was improperly charged the amount of \$137. Refund of this amount is respectfully requested by crediting this deposit account.

IV. MANNER OF REFUND

Please make refund by

- ☒ crediting Account No. 18-0350.
☐ refunding payment.

Respectfully Submitted,

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 101. The concentration of the *Agrobacterium* strain 101 was varied from 10⁵ to 10⁸ cells/ml. The transformation efficiency was determined by the number of transformants per 10⁵ cells of the *Agrobacterium* strain 101. The data are the mean \pm SD of three independent experiments.

The map shows the northern Adriatic coastline of Italy and Slovenia. Sampling stations are marked with numbers 1 through 10. Station 1 is located near the Italian coast, while stations 2-10 are further out in the sea. A scale bar at the bottom indicates distances from 0 to 100 km. A north arrow is also present.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher for the 10-trial condition than for the 5-trial condition. Error bars represent the standard error of the mean.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

10

Figure 1. The distribution of the number of children per family in the sample. The x-axis represents the number of children (0 to 10), and the y-axis represents the percentage of families (0% to 100%). The distribution is skewed to the right, with a peak at 1 child (approximately 45%).

10

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher for the 10 trials condition than for the 5 trials condition. Error bars represent the standard error of the mean.
